## What is Farm Net Zero?

Farm Net Zero is a five year project from the farming community in Cornwall to show the contribution that agriculture can make to achieving Net Zero.

Various farmer-led activities will support farms with practical steps to reduce emissions and sequester more carbon.

## What activities are planned?

- » **Three demonstration farms.** Hubs for training and inspiration for other farmers. Each demo farm has the challenge to reach net zero.
- » **Events & Workshops.**
- » **3 field labs.** Farmer-led research opportunity, run by Innovative Farmers.
- » **40 monitor farms** are having their carbon footprint and soil carbon measured, with support on practices to reduce emissions, improve soil health and carbon sequestration.
- » **Citizen Science project.** Helping communities implement climate friendly practices in their gardens, allotments and everyday lives.

## What is Net Zero?

The UK government has committed to achieving Net Zero emissions by 2050. This means the amount of greenhouse gas emissions added into the atmosphere will be balanced by the amount removed. This will impact every sector of society, especially farming and land use.

## Who's involved?

Six organisations have come together to support the community:

## Join in
